

LCR Metr
Design: Vojtěch Glombíček
FEKT VUT

The image shows a top-down view of a printed circuit board (PCB) layout. The board is white with red conductive traces. The layout is dense, with numerous circular and rectangular pads for components. A central text block identifies the project as 'LCR Metr' designed by 'Vojtěch Glombíček' at 'FEKT VUT'. The board has a rectangular shape with rounded corners and several mounting holes along the edges. The traces are routed in a complex pattern, connecting various components across the board. There are also some small, stylized drawings of components like capacitors and inductors scattered throughout the layout.
